

ABDUL RAFAY CHOHAN

Game Developer

Location: Lahore, Pakistan

Portfolio: [Rafay-chohan.github.io](https://github.com/abulrafaychohan)

Linkedin: [_Linkedin.com/in/abulrafaychohan/](https://www.linkedin.com/in/abulrafaychohan/)

Mail: abrckchohan@gmail.com

Phone: +923163855583

Summary

Unity **Game Developer** with hands-on experience building and scaling **casual & hyper-casual** mobile games for **Android & iOS**. Currently working at **Mindstorm Studios**, contributing to core gameplay **mechanics**, modular level **systems**, **solvers**, and generation tools used across multiple titles. Experienced in **C#**, **Unity** optimization, physics-based gameplay, and **VR** interaction systems. Comfortable working independently in production environments and collaborating with cross-functional teams remotely

Experience

Mindstorm Studios

Associate Game Developer

07/2025 - Present

- Worked on **Android & IOS** Casual/Hyper casual **Mobile Games** with thousands of daily active users (DAU).
- Worked on Various big titles of Studio like [Arrow Out](#), [Block Buster](#) and many more by working on their mechanics and core gameplay elements.
- Contributed by making **Solvers & Level generation** utilities to help speed up the scaling process of games and reducing level design iteration time.
- Developed **Level systems & Theme systems** made with modular approach to be used in multiple games.

EIX (Enterprise Information Xperts)

Associate Software Engineer

01/2024 - 07/2025

- Debugged and enhanced existing **Java microservices**, improving system efficiency.
- Contributed to **Java-based backend services and OTMM (OpenText Media Manager)** solutions.
- Deployed and Configured OTMM services for clients.

Digital Empowerment Network

Machine Learning Intern

08/2024 - 09/2024

- Built various **machine learning models** for different use cases.
- Implemented **data preprocessing, feature engineering, and model evaluation techniques**.

M-Labs

Game Development Intern

06/2024 - 08/2024

- Designed and developed a **mobile game using Unity and C#**, incorporating mechanics inspired by **Angry Birds and Ricochet Kills**.
- Optimized **physics-based interactions** and implemented custom game mechanics to enhance user engagement.

Projects

VRhythm (VR Game)

10/2024 - Present

- Developed a **VR-based** music learning app in **Unity & XR toolkit(OpenXR)**, that utilizes **hand tracking & gesture recognition** to play and learn musical instrument.
- Designed a **3D Virtual Space** where user can interact with the instrument. Learn instruments using visual cues in Virtual environment for any song the user wanted.

Arrow Rebound (Android Game)

<https://github.com/zophiel27/Jame-Gam>

02/2024 - 05/2024

- A **Hyper-Casual 2D physics based** developed on Unity Engine using C#.
- Implemented **slingshot input system**, **collision-based ricochet logic**, and **physics** tuning using **Rigidbody2D**.
- The game brings the fun of **Archery** in a **2D** space to solve **puzzles** and clear objectives.
- Since Each level can be solved in different ways the game becomes rewarding for people who come up with out of the box solutions to solve levels.

Hyper Racing (Android Game)

<https://github.com/Rafay-Chohan/Hyper-Racing>

02/2024 - 05/2024

- A **fast-paced** arcade-style mobile **racing game** that combines high-speed competition with **power-up mechanics** inspired by an old pc game "Blur".
- Players race against **AI opponents** ("drivatars") on dynamic tracks, using **boosts and projectiles** with collision and physics to gain an edge.
- The game emphasizes accessibility, quick sessions, and progression through unlockable content.

3x3 Puzzle (Android Game)

<https://github.com/Rafay-Chohan/3x3-Puzzle-Android-App>

02/2024 - 05/2024

- A classic **Grid based** sliding puzzle game where players can use any image from their gallery, shuffle it, and then solve it by rearranging the tiles to match specific order.
- The game offers a nostalgic and fun experience.

Additional AI/ML Projects

<https://github.com/Rafay-Chohan/Machine-Learning>

08/2024 - Present

- **Image Generation (VQ-VAE Model):** Developed a **VQ-VAE model** to generate images based on labeled data.
- **CNN Image Classifier:** Designed a **CNN model with 3 convolutional layers** to classify CIFAR-10 dataset images.

LifeSync (Android App)

<https://github.com/Rafay-Chohan/LifeSync>

02/2024 - 05/2024

Individuals with ADHD struggle with daily task organization. So for that Developed a **Java-based Android app** providing personalized **task scheduling, reminders, and productivity tracking**.

Arc Encrypt (Android App)

<https://github.com/Rafay-Chohan/Arc-Encrypt>

06/2024

Privacy concerns in text messaging due to insecure communication channels. Created an **encryption-based app using Java**, utilizing a **coprime encryption algorithm**.

Skills & Tools

Game Development: Unity (2D & 3D), C#, OpenXR, Firebase

Programming Languages: C#, C++, Python, Java, PHP

Machine Learning & AI: Python, TensorFlow, CNNs, NLP, ANN, Data Preprocessing

Tools: Git, Github, Fork, Asana

Education

National University of Computer and Emerging Sciences

2021 - 2025

B.Sc. in Computer Science

PakTurk Maarif International Schools and Colleges

2019 - 2021

Intermediate (Pre-Engineering)

Awards

Dean's List of Honor

National University of Computer and Emerging Sciences
